LAB TASK-2

❖ Create a text file that contains 8 float numbers. Store the float numbers into an array.
  ➢ Find the average value of the elements of the array.
  ➢ Find the minimum and maximum value of the elements of the array.

❖ Create a text file that contains 6 valid keywords and 4 invalid keywords of C/C++. Write a program that will identify as well as print the valid and invalid keywords from the text file.

❖ Create a text file that contains 5 words. Write a program to print the concatenated output of the words.
